EDUCATION

Vishwakarma Institute of Technology, Pune, B.tech
Computer Science And Engineering (Artificial intelligence)
CGPA : 8.89

Expected May 2028

TECHNICAL SKILLS

Languages: C++, Python, JavaScript

Frameworks & Tools: Node.js, Express.js, React, Pandas, Streamlit

Databases: MySQL, PostgreSQL, MongoDB

Core Concepts: Machine Learning, Data Structures & Algorithms

PROJECTS

◆ Smart Stock Movement Predictor

Built a machine learning model to predict next-day stock price direction (Up/Down) using historical market data.

- Collected stock data using yfinance and processed it with Pandas
- Engineered features using technical indicators (moving averages, RSI, MACD, returns)
- Trained and evaluated models using Scikit-learn (Logistic Regression, Random Forest)
- Achieved ~56% accuracy with time-series validation

◆ URL Shortener App

- Built a full-stack URL shortener with unique link generation and redirection.
- Designed RESTful API for shortening and resolving URLs.
- Implemented database storage and link analytics tracking.
- Deploy frontend on vercel and Database on Neon.
- Tech: Node.js, Express, SQL, React

◆ Support Triage Agent (RAG-based System)

- Developed a terminal-based support triage agent to classify user queries and automate response handling
- Designed a Retrieval-Augmented Generation (RAG) pipeline for accurate information retrieval
- Implemented query classification to route tickets into auto-response or escalation workflows
- Tech Stack: Python, Vector Search, Streamlit

◆ Dev Navigator – Learning Platform (Conference Project)

- Developed a learning platform for guided tech navigation.
 - Research paper published in ICMREST-2025.
 - Focused on structured learning recommendations and roadmap design.
- Tech : Python , streamlit, Neo4j

🏆 ACHIEVEMENTS

- Solved 450+ problems on LeetCode
- Published Research Paper at ICMREST-2025 Conference
